

DANLY

# ***SuperSprings<sup>®</sup>***

**High Performance Die Springs**

*We take die springs very seriously ... that's why we recently built the most sophisticated die spring manufacturing plant in the world. You won't find a better die spring at any price.*

*Not all die springs are the same. Compare SuperSprings® to the competition. You'll find ...*

- Longer Life (see next page) - less downtime means greater productivity.
- Consistent Dimensional Accuracy - tighter tolerances on free lengths and perpendicularity.
- Because our die springs are more dimensionally accurate, our spring rates are more accurate.
- Better Value - With SuperSprings®, you'll buy fewer die springs and lower your operating costs.
- We offer applications expertise, both technical support from our lab and sales support in the field.

*We are the die spring experts in our industry. Try our SuperSprings®, and you'll see the difference for yourself!*

## SuperSprings®

### • Four Load Classes, Guaranteed Fit, Fully Interchangeable

More than 400 SuperSprings® are available in four colour-coded load classifications. Uniform lengths and diameters provide full interchangeability between load ratings. Spring diameters are guaranteed to fit in the hole and over the rod diameters listed in the dimensional data. Lengths, diameters, rates, and colours are in accordance with ISO 10243.

### • Engineered for High Performance and Long Service Life

Each SuperSpring® has the optimum design, pitch, and metallurgical content for efficient performance. Rectangular wire springs are made from a trapezoidal cross section wire, which changes to a "D" cross section during coiling. This shape results in a lower maximum stress level, substantially contributing to longer spring life.

Modified trapezoidal cross section of rectangular wire springs changes to a "D" cross section during coiling.

DANLY applies several advanced manufacturing processes to enhance the life of SuperSprings®. These include precision heat treating, shot peening to reduce mechanical stresses, and presetting by compressing to solid for increased set resistance and greatest resistance to fatigue.

### • Dependable Performance is Quality-Assured

SuperSprings® are manufactured exclusively from vacuum degassed, valve spring quality alloy steel. State-of-the-art equipment, including CNC coiling and grinding, is employed to achieve consistent dimensional accuracy within narrowest tolerances. Each production run is thoroughly inspected and documented to maintain strict quality. The result is a die spring of unsurpassed quality which many of the world's most demanding users specify for long, dependable performance.

Ends of each spring are closed and ground square to assure every spring will stand on either end, providing a maximum bearing surface and improving performance.

# SuperSprings® Selection and Use

As the ratio of preload to total deflection increases, spring life increases. We recommend that you use a generous preload in your tool design whenever possible.

As the ratio of total deflection to free length decreases, spring

life increases. Spring life can often be improved by drilling the spring pockets deeper and selecting the next longer spring.

The chart below and the spring tables presented on the following pages are designed to help you quickly select the die spring best suited to your needs.

## Converting Compressed Lengths to Free Lengths

# MEDIUM LOAD

Vacuum degassed,  
valve spring quality alloy steel

Sizes: 10 to 16 mm

Colour: Blue

## Spring Retainers

- all steel construction, zinc-plated finish
- compatible with 20 and 25 mm diameter spring rods
- use with any length that allows clearance

DANLY Spring Retainers locate and provide a light pre-load to each spring. This allows for easy assembly and disassembly of strippers in a die even while in the press. Broken springs can easily be replaced without long downtime.

Shoulder bolts or spools must be used in conjunction with the DANLY Spring Retainer.
